Sushaasan

**Government OS for India | Harsh Sonavane, Founder
| sushaasan.in | Pune, May 2026**

□ Innovation & Technological Differentiation

- Key Points:

First-of-kind multilingual civic intelligence pipeline — passive ingestion across 7 public sources, AI synthesis in 22 Indian languages, sovereign Indian AI stack (Sarvam, Bhashini, Voyage-3)

3-stage Claude pipeline (classify → cluster → synthesize) with hallucination-trace guardrail: every AI claim resolves to a real public post or it is rejected

TRL 7 — live MVP on real PMC GeoJSON at sushaasan.in/dashboard. NIBM digital twin at [/dashboard/nibm](https://sushaasan.in/dashboard/nibm) runs 19 real signals through full pipeline → 5 root-cause clusters → 4 ranked interventions → 7-tier procedure-aware routing

The Sushaasan Loop

— how the Government OS works

- LISTEN — public scrapers ingest 7 sources (X, Reddit, IG, FB, Telegram, Maps, news). Privacy-first, hashed authors, no PII
- SYNTHESIZE — Claude classifies + clusters per ward; writes step-by-step solutions with PMC-aligned cost & timeline
- ACT — Corporator marks resolved on dashboard; citizens see same status. One team, no blame
- STACK — Next.js + Mapbox + Supabase pgvector + Claude. Infra cap ₹25k/mo
- PILOT — PMC Wards 43 + 46. Live demo: sushaasan.in/dashboard/nibm

□ Market Potential & Problem-Solution Fit

- Key Points:

PROBLEM — 500M+ Indians vent civic grievances on social media monthly. CPGRAMS reaches 0.19% of India. The gap = no infrastructure to capture the 99.81%. Result: ₹1 lakh crore / year of urban budgets spent without structured citizen input

MARKET — 4,800+ Urban Local Bodies + 270k Gram Panchayats. Tier-1 cities: ₹10–25L / city / year. Tier-2: ₹3–8L. TAM ₹2,500 cr. SAM 250 cities = ₹350 cr. Beachhead: 30 cities by Y4 = ₹15 cr ARR

DIFFERENTIATION — vs CPGRAMS / IGMS 2.0 (official-side analytics): Sushaasan is the citizen-side participatory layer they lack. vs Reap Benefit / SocialCops: we are AI-native, multilingual, ward-granular. vs Kondo City: we go beyond hotspots into solution-generation + loop-closure

□ Business Model & Revenue Strategy

- Key Points:

B2G SaaS — Municipal corporations + state urban depts pay annual licence: Tier-1 city ₹10–25L, Tier-2 ₹3–8L. Citizen dashboard always free (trust = the moat). Y2+ adjacent revenue: API access (₹1–3L/seat), state Smart City SPV briefs, AIKosh dataset licensing

UNIT ECONOMICS — At pilot scale: city ARPU ₹15L, infra cost ₹3L/year/city, contribution margin 80%. Cost per citizen reached: ₹0.43–0.78/month vs ₹50–200 per CPGRAMS grievance — 100–500× more cost-effective

GROWTH — Y1: 3 paid pilots (₹50L). Y2: 8 cities (₹2 cr ARR). Y3: 18 cities (₹6 cr). Y4: 30 cities (₹15 cr). Y5: 100 cities (₹50 cr). Path-to-profitability at 30 cities. Government contract-led, not advertising-led

□ Team Strength & Capability

- Key Points:

FOUNDER — Harsh Sonavane (Pune). First-time founder, full-time on Sushaasan. Direct corporator + nagar sevak relationships in NIBM/Wanowrie pilot ward — wired loop-closure from Day 0. Civic conviction: started this after watching Pune spend ₹500 cr in 75 days for one Bajaj event while basic potholes went unfixed

EXECUTION — Shipped public MVP end-to-end in <8 weeks: Next.js, Mapbox, real PMC GeoJSON, full AI scaffolding. Live at sushaasan.in/dashboard. Ran founder outreach across 30+ investors and 5 incubators in parallel. Active hiring underway: CTO + NLP engineer (₹50–75 lakh pre-seed earmarked)

PARTNERSHIPS — eGov Foundation (Nandan Nilekani's DPI vehicle), MIT-WPU TBI, Venture Center Pune, IndiaAI Mission, AJVC (Pune-based, civic-tech precedent). Strategic advisor pipeline includes IGMS 2.0 / DARPG alumni and IIT NLP faculty

□ Social/Strategic Impact (especially for SIIC)

- Key Points:

CIVIC IMPACT — 500M+ Indians get a structured voice in governance.

Multilingual (22 scheduled languages) means Tier-2/3 cities and rural voices stop being excluded by language barriers. Each city pilot = 100k+ citizens with ward-level transparency

NATIONAL PRIORITY ALIGNMENT — (1) AI for Viksit Bharat 2047. (2)

AIKosh / IndiaAI civic dataset contributor. (3) Smart Cities → City Economic Regions transition. (4) Bhashini multilingual mission. (5) Sovereign Indian AI stack — no American cloud dependency for civic data. (6) DPI philosophy — interoperable, open, public good

UNDERSERVED FIRST — Pilot ward chosen for trilingual signal density (English / Marathi / Hindi). Pipeline is geography-agnostic — same code scales to any of India's 4,800+ ULBs and 270k Gram Panchayats. Civic discourse dataset will be open-sourced to AIKosh as a Digital Public Good

☐ Support Needed from SIIC

- Key Points:

FROM SIIC — (1) Faculty mentorship in NLP, urban governance, DPI — Kotak School of Sustainability + IGMS 2.0 team. (2) Government legitimacy via SIIC's MoUs with DARPG / MoHUA / IndiaAI. (3) IITK GPU cluster compute alongside our IndiaAI Compute Portal application. (4) SISFS pathway (₹20–50L). (5) Cohort exposure to AI-for-Bharat founders. (6) Co-working at SIIC for Q1 cohort. (7) AIKosh contributor program intro

☐ Details on Investment

- Key Points:

ASK — ₹50–75 lakh pre-seed (cash + SISFS bridge)

USE OF FUNDS — (1) CTO + NLP engineer hires: ₹35L. (2) 3 city pilots (PMC, then 2 more): ₹10L. (3) AIKosh + IndiaAI compute: ₹4L. (4) Infrastructure 18 mo @ ₹25k cap: ₹4.5L. (5) Legal + DPIIT + trademark: ₹2L. (6)

Founder runway + buffer — ₹4L

MILESTONES (18 mo) — 3 paid municipal corporation pilots signed | NIBM full loop-closure proven (corporator marks resolved → citizens see it) | Civic-discourse dataset v1 contributed to AIKosh | ₹50L ARR run-rate

VALUATION — ₹3–4 cr post-money pre-seed (10–20% dilution at ₹50–75L raise). Civic-tech comparable: Jaagruk Bharat, ₹1.5 cr at AJVC, October 2025
